Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Alex is learning about Java's functional interfaces and lambda expressions.

He wants to write a simple program that prints the square of each number in an array using a predefined functional interface.

Help Alex complete this task using the Consumer functional interface.

Input Format

- The first line contains an integer N, the number of elements in the array.
- The second line contains N space-separated integers.

Output Format

- Print the squares of all elements in the array, separated by a space.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 4

1 2 3 4

Output: 1 4 9 16

Answer

// You are using Java

```
import java.util.*;
```

```
interface square {  
    int[] cal(int[] arr);  
}
```

```
class p {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
        int n = sc.nextInt();  
        int[] arr = new int[n];  
        for(int i = 0; i < n; i++) {  
            arr[i] = sc.nextInt();  
        }  
        square sq = (arr1) -> {  
            int[] arr2 = new int[n];  
            int i = 0;  
            for(int r : arr1) {  
                arr2[i++] = r * r;  
            }  
            return arr2;  
        };  
        int[] arr3 = sq.cal(arr);  
        for(int i = 0; i < n; i++) {  
            System.out.printf("%d ", arr3[i]);  
        }  
    }  
}
```

Status : Correct

Marks : 10/10
